MEDICAL AI DIAGNOSTIC & ANOMALY DETECTION REPORT
==========

Report ID : RPT-D20E5B5F
Created : 2026-08-02T15:25:11.762999+00:00
Patient ID: PT-104928
Case ID : CASE-REQ-2026
Modality : Chest Xray

DIAGNOSTIC SUMMARY

Predicted Disease : Pneumonia
Model Confidence : 94.6%
Primary Finding : Pneumonia detected with 94.6% confidence.

DIAGNOSTIC IMPRESSION
Automated evaluation of chest xray image (Request ID: REQ-20260802-CXR) demonstrates high likelihood of Pneumonia (94.6

VISUAL EXPLAINABILITY
GradCAM visual saliency mapping highlights concentrated spatial activation covering approximately 16.2% of the region of inter

ANOMALY & OOD ASSESSMENT
Out-of-Distribution (OOD) analysis confirms the input sample is within normal training distribution boundaries (Status: KNOWN_

CLINICAL RECOMMENDATIONS

Action Code : ROUTINE_FOLLOW_UP
Recommended Action: Clinical Correlation & Specialist Follow-up Recommended
Urgency Level : URGENT
Rationale : Positive diagnostic detection for Pneumonia (94.6% confidence) within normal distribution parameters.

PROCESSING STATISTICS
Model Architecture: DenseNet-121
Engine Latency : 24.30 ms
Platform Version : v0.18.0.0
